CnD Game

Т. Идея

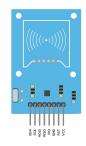

Идея

- "магический бой"
- 2 игрока
- карточки-заклинания
- ходы
- статы

Архитектура

NodeMcu (ESP8266)

RFID-RC522

3. Данные

NoSQL JSON

игроки

clouds-and-droids

статы

battles

settings

cards

битва

34:39:83:59:5a:53:87

mana: 5

name: "fireball"

спеллы

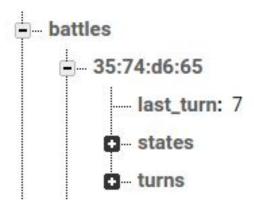

эффекты

max_hp: 50

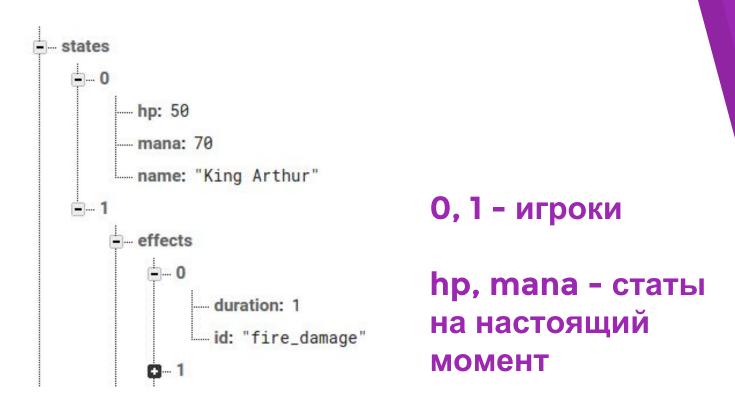

max_mana: 50

ходы

clouds-and-droids

states - состояния игроков turns - последовательность ходов в этой битве

effects - эффекты, наложенные на игрока на настоящий момент

target - игрок, на которого была сыграна карта

4.
ESP & RFID

ESP8266

- Wi-Fi + GPIO
- Нет абсолютно никакой обвязки
- Arduino совместимая

NodeMcu v3

- Базируется на ESP
- Содержит прошивальщик
- Arduino совместимая

RFID-RC522

- Решение для чтения RFID и NFC карт
- 5 пинов для взаимодействия
- Количество пинов подходит для реализации прототипа

Библиотеки и инструменты

- Arduino IDE
- Atom PlatformIO как альтернатива
- Плагин ESP для Arduino IDE
- Firebase Arduino library (Official)
- RFID-RC522 library

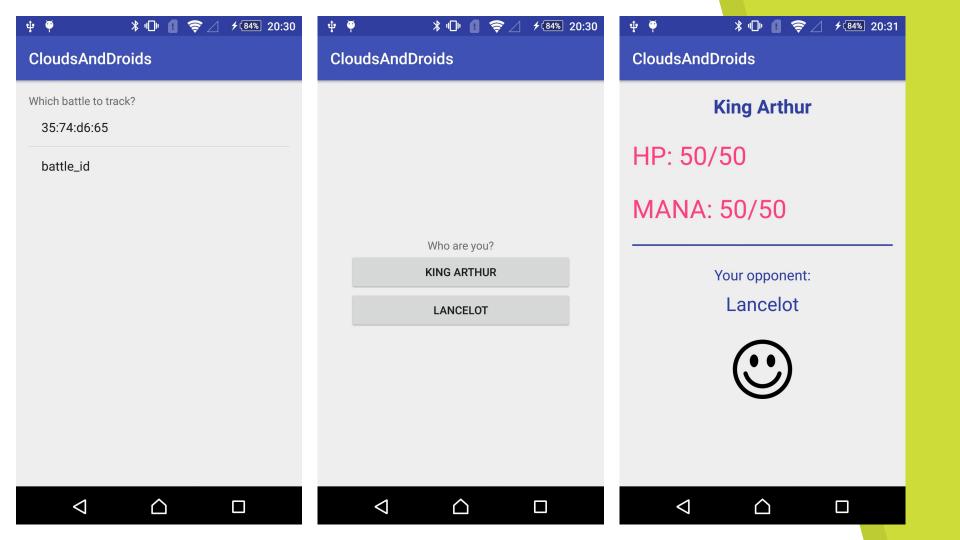

Распиновка RC522

RC522	ESP8266	Comment
SDA	D0	Configurable/Any
SCK	D5	
MOSI	D6	
MISO	D7	
IRQ	NONE	Not used
GND	G	
RST	D1	Configurable/Any
3.3v	3V	

Firebase: Чтение

```
int cardMana = Firebase.getInt("cards/" + cardUid + "/mana");
if(firebaseFailed()) return 1;
if(cardMana > playerMana)
  return 2;
Firebase: Запись
StaticJsonBuffer<200> jsonBuffer;
JsonObject& turn = jsonBuffer.createObject();
turn["card"] = cardUid;
turn["target"] = player;
Firebase.setInt("battles/" + battleId + "/last turn/", turnNumber);
if(firebaseFailed()) return 1;
Firebase.set("battles/" + battleId + "/turns/" + turnNumber, turn);
if(firebaseFailed()) return 1;
```

5. Android

Добро пожаловать в Firebase!

Добавьте Firebase в свое приложение для iOS

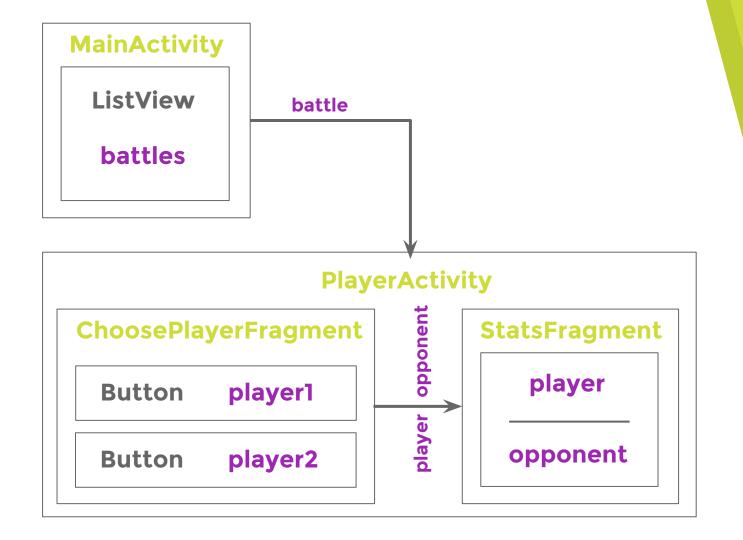

Добавьте Firebase в свое приложение для Android

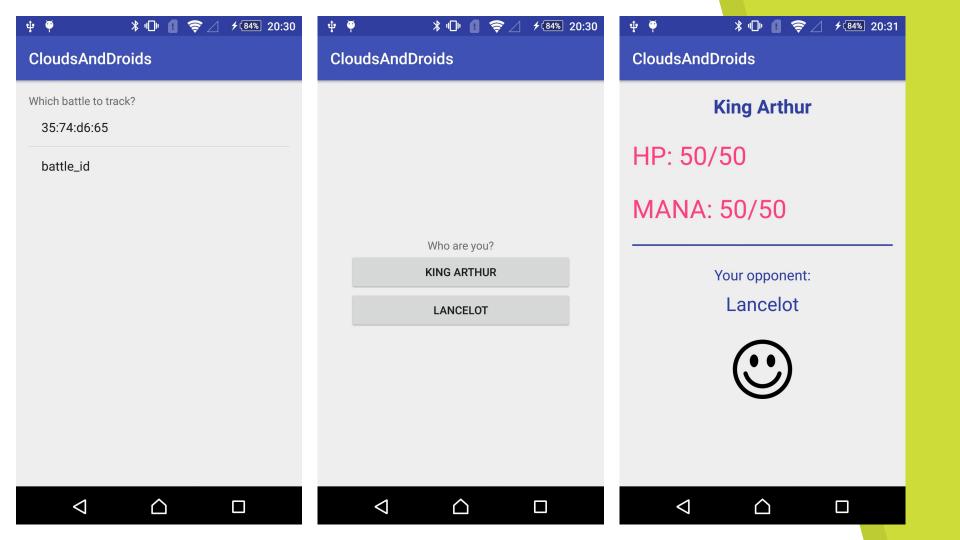

Добавьте Firebase в свое вебприложение

- google-services.json
- gradle

```
buildscript {
    // ...
   dependencies {
        // ...
        classpath 'com.google.gms:google-services:3.0.0'
buildscript {
    // ...
    dependencies {
        // ...
        classpath 'com.google.gms:google-services:3.0.0'
```

```
database.getReference().child("battles")
.addValueEventListener(new ValueEventListener() {
    @Override
    public void onDataChange(DataSnapshot battles) {
        final List<String> battleIds = new ArrayList<String>();
        for (DataSnapshot battle : battles.getChildren())
            battleIds.add(battle.getKey());
        if (battleIds.size() == 0) {
           // ...
    @Override
    public void onCancelled(DatabaseError databaseError) {
        // ...
```

6.
Web

React + ReactFire

1. Include Firebase and ReactFire

```
<!-- React JS -->
<script src="https://fb.me/react-15.3.0.min.js"></script>
<script src="https://fb.me/react-dom-15.3.0.min.js"></script>
<!-- Firebase -->
<script src="https://www.gstatic.com/firebasejs/3.3.0/firebase.js"></script>
<!-- ReactFire -->
<script src="https://cdn.firebase.com/libs/reactfire/1.0.0/reactfire.min.js"></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></
```

2. Initialize the Firebase SDK

```
var config = {
    apiKey: "AIzaSyDxjJHS6QcSn-30tB74V4yFoGAmaUpN6pA",
    authDomain: "clouds-and-droids.firebaseapp.com",
    databaseURL: "https://clouds-and-droids.firebaseio.com",
    storageBucket: "clouds-and-droids.appspot.com",
    messagingSenderId: "13403260399"
    };
firebase.initializeApp(config);
```

3. Add the ReactFireMixin

```
var Spell = React.createClass({
  mixins: [ReactFireMixin],
  // ...
});
```

4. Bind to Firebase

```
getInitialState: function() {
    return {
        turn: {}
     };
componentWillMount: function() {
    var turnRef = firebase.database().ref("battles/35:74:d6:65/turns/" +
        this.props.lastturn);
    this.bindAsObject(turnRef, "turn");
render: function() {
    // ...
    if (this.state.turn.target == 0)
```

Fire bolt ->

King Arthur

Lancelot

7. Middle Server

Ruby + rest-firebase

```
gem 'rest-firebase'

f = RestFirebase.new :site => URL

@cards = f.get("cards")

f.put("battles/#{battleId}/states/#{index}", state)
```

```
es = f.event_source("battles/#{@board id}")
es.onmessage do | event, message, sock |
  // ...
  turn = message['path'][/turns\/([0-9]+)/, 1]
 // ...
  card = @cards[message['data']['card']]
 // ...
  end
end
es.start
es.wait
```

8.
Feature

Requests

Винекциве:

- о увеличить количество игроков
- добавить более сложные эффекты от спеллов
- рандомайзер
- контроль за ходами
- 0 ...
- проработать физическую часть
- отображение на клиентах
- контент
